

**The service call is done.
The office work is not.**

Job notes. Receipts. Invoices.
Quotes nobody followed up on.

We help clean up one handoff,
so less work follows you home.

WHERE IS THE HOLDUP?

Job finished
Notes missing
Invoice waiting

An example to check in your shop.

Which part of the day follows you home?

Paperwork	Job notes, parts receipts and invoices scattered across tools.
------------------	--

Follow-up	Open quotes and unpaid invoices without a clear next step.
------------------	--

Dispatch	Schedule changes turning into more calls and messages.
-----------------	--

Slow weeks	Maintenance visits and renewals that need a plan.
-------------------	---

Not every shop has every problem. Pick the gap your records actually show.

Turn a finished job into an invoice-ready packet.

Less chasing and retyping. Your team approves the money.

01

Gather

Approved job notes,
parts and receipts.

02

Prepare

Draft the description.
Flag missing details.

03

Approve

Your team reviews,
checks and sends.

Keep the invoice in your existing system. No guessed prices, tax rates, parts or customer approvals.

Messy inputs. A clear review queue.

WHAT ARRIVES

A technician's job note.

A parts receipt.

A customer approval record.

Use only records the shop approves.

WHAT YOUR TEAM REVIEWS

Draft work description

Attached supporting records

Missing information flagged

Approve, correct or send back to the tech.

This is a workflow sketch, not a product screen. No invoice posts automatically.

Cleaner paperwork. Your bookkeeper in control.

AI helps prepare

- Extract details from approved receipts.
- Suggest labels for review.
- Summarize missing records.
- Draft clear job descriptions.

Your bookkeeper decides

- Final categories and reconciliation.
- Tax treatment and payroll.
- Prices, credits and adjustments.
- Posting and financial sign-off.

This is workflow setup, not an accounting or tax service. Check native QuickBooks features first.

Fix that instead. Do not force an AI project.

Open quotes + invoices

Set up approved reminders. AI can draft messages and summarize replies.

Track decisions, payment timing and opt-outs.

Dispatch communication

Summarize updates from the live board. People choose crews and promise ETAs.

Track office chasing, errors and repeat calls.

Slow-season maintenance

Prepare an eligible customer list and reminder drafts for approved service plans.

Track booked visits. Do not promise demand.

Missed-call intake is another option if call logs show the need. Native automations may be enough.

Keep time, cash flow and profit separate.

TIME

Less admin

Measure hours spent chasing notes, entering details and checking records.

CASH FLOW

Earlier invoicing

Measure days from completed job to invoice, then days to payment.

PROFIT

Fewer dropped steps

Count only additional completed, paid work, minus its costs and the workflow cost.

Time freed is not automatically cash saved. Faster invoicing is not new revenue. No results guaranteed.

A small scope. A price you can check.

Setup

\$750

One workflow, templates and instructions.
A training call and one revision round.
Scope agreed before payment.

Optional support

\$350 / month

Monthly review, minor changes and fixes.
Up to one hour of support per month.
New workflows are separate projects.

You pay software/usage. Custom integrations get separate quotes. Check your existing tools first.

Bring one job that got stuck in the office.

We will check the handoff before recommending a tool.

What information was missing?

Who had to chase it?

What did it delay?

**One real job.
One fix to test.**
